What is Apache Camel ?

<https://camel.apache.org/>

Apache Camel is an **Open Source** Integration
Framework

Apache Camel

Domain Specific Language (DSL)

```
from("kafka:topic")  
    .unmarshal().json()  
    .to("atlasmap:servicenow.adm")  
    .to("json-validator:gcpschema.json")  
    .to("http:my-host/api/path")
```

Libraries
POJO
Biz Logic...

EIP

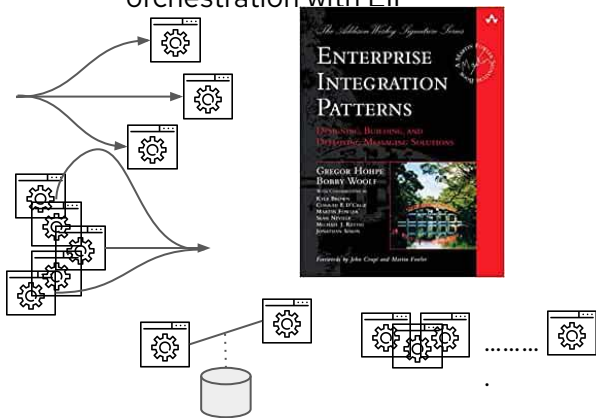

- ▶ Microservices orchestration with EIP

Why use Apache Camel ?

Apache Camel

- The biggest and most active community for Open Source **integration** software

Apache Camel

- The biggest and most active community for Open Source **integration** software
- You can connect to almost everything

Apache Camel

- The biggest and most active community for Open Source **integration** software
- You can connect to almost everything
- Focus on your use case logic

Runtimes

Camel runs on

(but not limited to)

Spring Boot

Standalone

QUARKUS

MICROPROFILE™
OPTIMIZING ENTERPRISE JAVA

WildFly 

VERT.X

Knative/Kubernetes

Karaf

APACHE
kafka®

Camel Quarkus

Camel Quarkus brings together the
awesome integration capabilities of
Apache Camel and its vast
component library to the
Supersonic, Subatomic Quarkus
runtime

How does a *framework* start?

Build Time

*Packaging
(maven, gradle...)*

Runtime

*Load config file from file system
Parse it*

*Classpath scanning to find
annotated classes
Attempt to load class to
enable/disable features*

*Start the
management
(thread, pool...)*

*Build its model of
the world.*

The Quarkus Way

Runtime

Build Time

Why Apache Camel on Quarkus

- Small size on disk \Rightarrow Small container images

Why Apache Camel on Quarkus

- Small size on disk \Rightarrow Small container images
- Fast boot time \Rightarrow Instant scale up

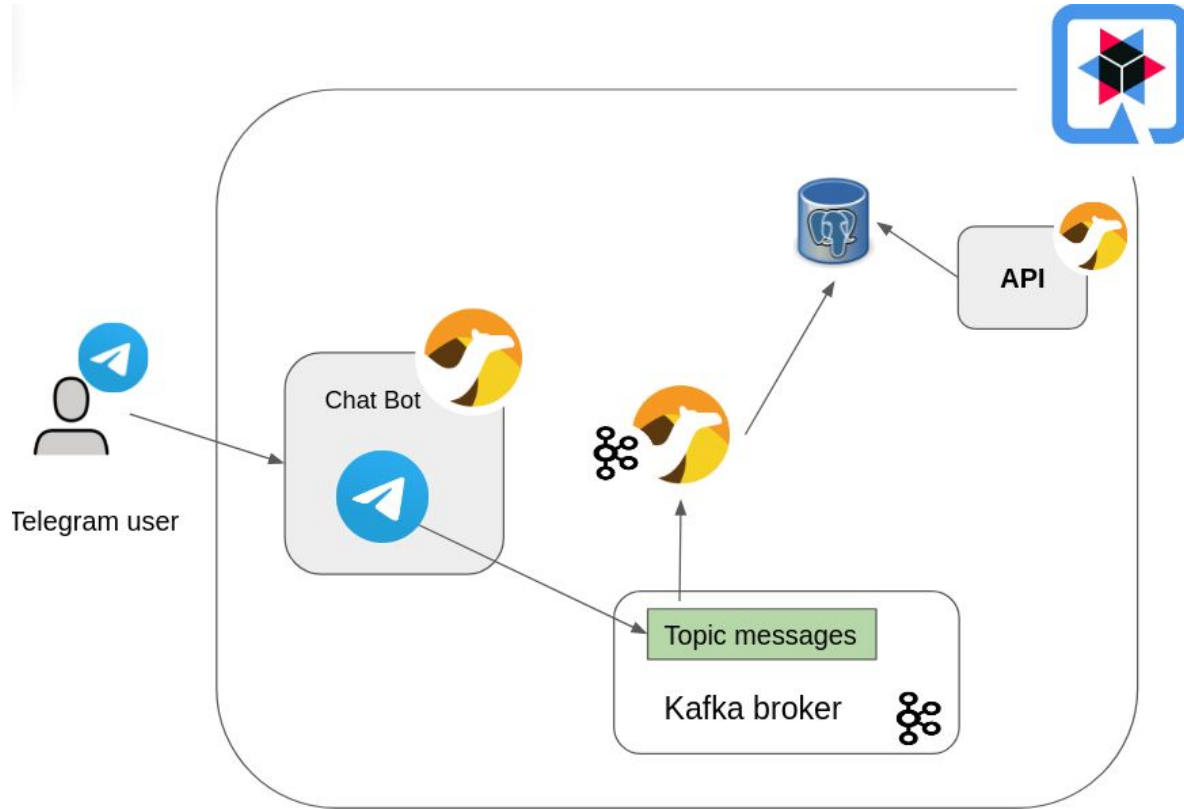

Why Apache Camel on Quarkus

- Small size on disk \Rightarrow Small container images
- Fast boot time \Rightarrow Instant scale up
- Low memory footprint \Rightarrow More containers with the same amount of RAM
